My Server is a VPS with CENTOS 6.8

- I Installed SlimerJS 0.10.2
- I have installed Mozilla Firefox 45.6
- I have installed CasperJS 1.1.3
- I have installed PhantomJS
- I have installed xvfb 1.17.4

I need a script that will automatic make Purchases on Amazon.it

For example I will give this parameter from PHP:

```
// LIST OF ITEM TO PURCHASE
$ASIN = [ // example

        'B00O7MTTZY' => 2, // ASIN => QUANITY

        'B00HSMRBN2' => 1

];
$Account = [// example

        'email' => 'email@gmail.com',

        'password' => '12345678',

]
$TOTAL = 167EUR; // total import of the purchase
$ADDRESS = [ // example
        'enterAddressFullName' => 'Name and Surname',

        'enterAddressAddressLine1Container' => 'Via giolitti, 3',

        'enterAddressAddressLine2Container' => '',

        'enterAddressCityContainer' => 'Buronzo',

        'enterAddressStateOrRegionContainer' => 'VC',

        'enterAddressPostalCodeContainer' => '13040',

        'enterAddressCountryCodeContainer' => 'IT',

        'enterAddressPhoneNumberContainer' => '00',

]
$CREDIT_CARD_ NUMBER = 'XXXXXXXXXXXXXXXX';

$SHIPPING = 'standard'; // Type of shipping.
```

Your script must make the purchase and return to PHP the order number.

The script MUST Check on the final page, before complete the order: <u>the total purchase price</u>, <u>that we are buyng the correct items</u> and <u>that the address is the right one</u>.

It can't use Amazon Prime for the purchase.
